**IDENTIFY INVERTEBRATES AND VERTEBRATES**

Many different animals share our planet with us. Many are alike, and many are different. Scientists **classify** animals based on their similarities. One way scientists group animals is whether or not those animals have a backbone. Other animals, such as squid, worms, bees, and clams do not have backbones. Scientists call these animals **invertebrates**.

Some animals, like dogs, cats, birds, lizards, fish, and even humans have backbones - Scientists classify backboneed animals as **vertebrate**.

Choose **five** animals from the list below. Write the animal's name, whether it is a vertebrate or invertebrate, and two important traits in the spreadsheet. An example has been provided for you.

- Scorpion Fox Octopus Snail Rabbit Wolf Deer  
T-Rex Spider Fish Jellyfish Turtle Beetle Hawk

Animal	Vertebrate / Invertebrate	Two important traits
Rabbit	Vertebrate	1. A rabbit has long ears. 2. A rabbit is a mammal.
